

Environmental Policy

Isotrading's Environmental Policy defines the company's environmental objectives.

Isotrading strives to achieve environmental standards in terms of preserving natural resources, energy consumption, waste management and protecting biodiversity.

Isotrading is fully aware of the possible changes that the battle against climate change implies for its organization.

In addition to efforts to reduce emissions directly linked to its activity, Isotrading, through its purchasing policy, wants, in its approach, to involve its partners, external service providers and customers.

At the same time, Isotrading is committed to raising awareness among its employees and guiding the actions to be taken to limit greenhouse gas emissions and to be able to measure the progress made.

As a result, we have decided to:

○ Set up environmental objectives by:

- Identifying opportunities to minimize the environmental impact of our service.
- Analyzing our main environmental impact with a Key Performance Indicator (KPI) Setting ourselves continuous improvement objectives.

○ Work to reduce our ecological footprint:

- Reducing the intercontinental flights required for our customers' deliveries.
- Purchasing from suppliers located on the same continent as the customer.
- Selecting the test laboratory / logistics platform closest to the chosen supplier.
- Avoiding errors which could lead to the return of goods or their destruction.
- Choosing videoconference meetings rather than business trips (customer visits, suppliers, audits).
- Continuously reducing our consumption of energy, raw materials and water.
- Reducing packaging by using recycled packaging as much as possible.
- Adopting the appropriate waste management practices (reduction, reuse and recycling).

☉ **Complying with the rules and regulations** leading our QMS to compliance with the ISO 14001 environmental standard.

☉ **Promoting environmental awareness by:**

- Ensuring that employees are aware of the Environmental Policy and their own responsibilities in this area.
- Encouraging our supply chain to comply with environmental standards.
- Encouraging the sharing of good environmental practices in our operations
